OSPO@GT is the central resource for open source projects including software, data, and tools. The **mission of the OSPO** is to develop and share best practices for open source development, usage, and release for Georgia Tech faculty, staff, and students.

The Open Source Program Office (OSPO) engages externally with the community on topics including secure open source software (OSS), open source AI, and open source education.

OSPO@GT hosts annual workshops, training sessions, and a virtual summer internship program (VSIP). This year's VSIP featured students working on HPC- and AI-related projects including **IBM Granite**, **MFEM**, **Cybershuttle**, and **MFC (2025 Gordon Bell Finalist)**!

Explore VSIP projects, training materials, and engagement opportunities at our website (QR code) and public GitHub site.

Students and Faculty present their OSS work at the March 2025 OSS and Scientific Software Workshop
